

About Poland

Polska w Europie

Poland in Europe

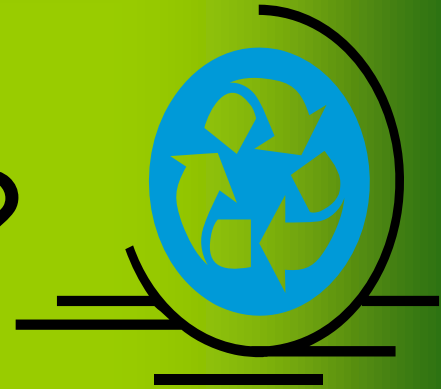

Warsaw in Poland.

Konstancin And Regions

How green are you ?

Our environment, our
school in Słomczyn and
us.

A clean Environment is
a daily comfort

Enjoy the comfort of a Clean Environment

- The comforts of the day, are health, inner wellbeing, which is portrayed on the outside. Thinking about comfortable surroundings-a clean and fresh environment one has to make a decision and put it into practice, it's nice to live in comfort (a clean environment) today and tomorrow, as well as in the future.

Do we really know how to live
comfortably and in agreement
with nature?

After thinking about this for a while, it proves for most of us it's not that simple, and it doesn't have the same meaning for everyone.

Is it possible to live comfortably,
when you turn off the tap while
washing your teeth?

What a waste of water

This is good !

Are you willing to have a shower
instead of lying in a bath full of
water?

What's the comfort of life when we hear that you must segregate your rubbish?

Are we able to resign from the 4 wheeled car and use 2 wheels instead of a few minutes drive to a shop, to a friend or cinema?

Treat oneself to a half an hour of a walk perhaps a longer road through a park by the river...it's a comfort we can still enjoy

We think our natural
surroundings are extraordinary.

There are recreation parks beautiful at every season. Also farmed fields orchards and meadows farm animals and also wild animals live here.

- . Our family, neighbours and all of us (inhabitants) of Konstancin Jeziorna look after our environment. That idea is built into us from our youngest years.**

13/09/2007

When I was four years old, my parents explained to me why do you throw out glass into a different container than plastic. They explained to me that we do this to help the Earth.

**I was overwhelmed with
the idea**

I can help the earth

13/09/2007

I felt I could do so much for the Earth and yet it's not that much, from then on I segregate products that they can be recycled. Also our teachers pay attention to this.

**In the corridor a container
stands for recycling batteries.
On the school grounds there are
containers for recycling.**

Each term, we organize a special day for the collection of paper we have a competition we weigh the paper and the class that brings in the most paper wins a school day trip (usually nature studies in the forest or about the manufacturing of paper)! This year our school gathered 3 tones of paper.

Mother's Day – Mother Earth

We set a silver pine tree and flowers in
our school grounds.

We can clean our world

Clean up the World and Day of the Earth

Autumn and Spring (22nd April) we tidy
the forest near our school.

We like this activity, it's fun and educational.

**For the last 3 years we are
involved in an ecological
program**

Deserved rest

And smile!

*A clean
environment*

—

*love it's
comfort!*

Recycling Paper in Konstancin Jeziorna

It's aim is to deepen ecological awareness in our locality especially among children, through education, underlining the affects of natural environment on the child's health. This year we work under the title clean environment – love the comfort

OCZYSZCZALNIA
"MOCZYDŁÓW"

Biological and mechanical sewage
treatment plant.

In our Moczydłowie we have a biological and mechanical sewage treatment plant. The sewage is first purified mechanically and then biologically treated. The sediment and sludge left over after the sludge process of the biological purification (biofiltration) is recycled as manure for the surrounding land area. There are no chemicals used in this treatment plant. The water is sent back to the homes in our area.

Is this a comfort?

We will continue propgating
a clean enviroment
and
ecological lifestyle
so that the next generation can
enjoy it's comfort.

It's better to prevent the accumulation of waste and look after the environment, rather than spend years of correcting a polluted world.

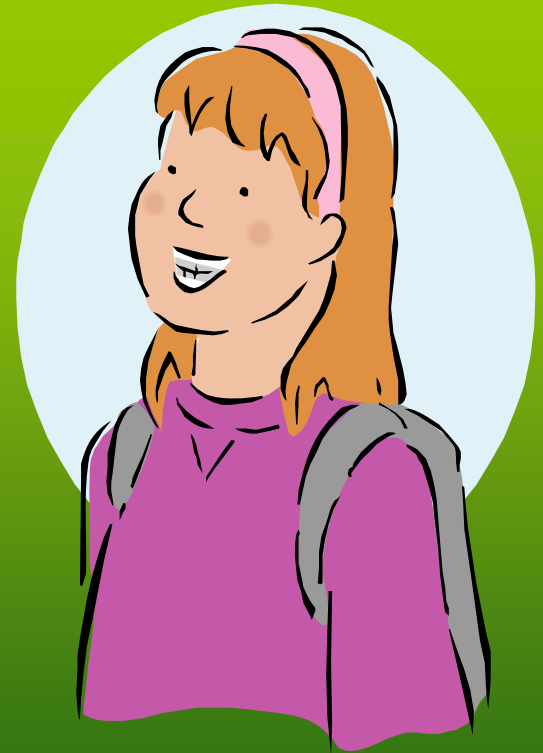

In this project we used information from :

- www.recykling.pl
- www.naszaziemia.pl
- And photo from our school and us.
